

The listing of claims presented below replaces all prior versions and listing of claims in the application.

Listing of claims:

1. (Currently Amended) A black ink composition comprising (1) water, (2) carbon black, and (3) a fine particle emulsion,

wherein (A) the content of said carbon black is less than 0.4 wt%,

and

wherein (B) the solid content of said fine particle emulsion is 20

times or more the content of said carbon black,

wherein said fine particle emulsion comprises a polyalkylene emulsion, an emulsion containing a pH-adjusted resin as a resin component or both and

wherein said pH-adjusted resin is obtained by a process comprising the steps of:

polymerizing an ethylenically unsaturated carboxylic acid monomer and another monomer copolymerizable with said ethylenically unsaturated carboxylic acid monomer in the presence of an alcoholic hydroxyl group-containing water-soluble polymer compound or a copolymerizable surfactant to give a copolymer having an acid value of 40 or less; and
adjusting the pH of said copolymer with an inorganic base.

2. (Previously Presented) The black ink composition according to claim 1, wherein the content of said carbon black is 0.01 wt% to less than 0.4 wt%.
3. (Cancelled)
4. (Currently Amended) The black ink composition according to claim ~~[[3]]~~ 1, wherein said inorganic base used for preparing said pH-adjusted resin is an alkali metal hydroxide or an alkaline earth metal hydroxide.
5. (Currently Amended) The black ink composition according to claim ~~[[3]]~~ 1, wherein said alcoholic hydroxyl group-containing water-soluble polymer compound used for preparing said pH-adjusted resin is a vinyl alcohol polymer.
6. (Currently Amended) The black ink composition according to claim ~~[[3]]~~ 1, wherein said ethylenically unsaturated carboxylic acid monomer used for preparing said pH-adjusted resin is an acrylic acid or a methacrylic acid.
7. (Currently Amended) The black ink composition according to claim ~~[[3]]~~ 1, wherein said monomer copolymerizable with said ethylenically unsaturated carboxylic acid monomer used for preparing said pH-adjusted resin is an ethylenically unsaturated carboxylate monomer.
8. (Currently Amended) The black ink composition according to claim ~~[[3]]~~ 1, wherein the

pH of said emulsion containing the pH-adjusted resin as a resin component is from 8 to 11.

9. (Currently Amended) The black ink composition according to claim ~~[[3]]~~ 1, wherein said polyalkylene emulsion is a polyethylene emulsion or a polypropylene emulsion.

10. (Currently Amended) The black ink composition according to claim ~~[[3]]~~ 1, wherein the total content of the solids content of said pH-adjusted resin and said polyalkylene emulsion is from 0.5 wt% to 20 wt% on the basis of the total weight of the black ink composition.

11. (Previously Presented) The black ink composition according to claim 1, further comprising a complementary colorant.

12. (Previously Presented) The black ink composition according to claim 1, which is an ink composition for ink jet recording.

13. (Currently Amended) An ink set comprising (a) a black ink composition comprising (1) water, (2) carbon black, and (3) a fine particle emulsion, wherein (A) the content of said carbon black is less than 0.4 wt%, and wherein (B) the solid content of said fine particle emulsion is 20 times or more the content of said carbon black ~~according to claim 1~~ and (b) a black ink composition having a higher carbon black concentration and being darker than said black ink composition.

14. (Previously Presented) The ink set according to claim 13, comprising:

a black ink composition comprising (1) water, (2) carbon black,
and (3) a fine particle emulsion,

wherein (A) the content of said carbon black is less than 0.4 wt%,
and

wherein (B) the solid content of said fine particle emulsion is 20
times or more the content of said carbon black;

a black ink composition for medium gradation containing carbon
black in an amount of from 0.4 wt% to 1.5 wt% on the basis of the total weight of the black ink
composition for medium gradation; and

a darker black ink composition containing carbon black in an
amount of from 1.5 wt% to 10 wt% on the basis of the total weight of the darker black ink
composition.

15. (Previously Presented) The ink set according to claim 14, wherein the black ink
composition for medium gradation comprises:

a black ink composition containing carbon black in an amount of
from 0.4 to 1 wt%;

a black ink composition containing carbon black in an amount of
from 1 to 1.5 wt%, or both.

16. (Previously Presented) The ink set according to claim 14, wherein the black ink

composition for medium gradation contains a fine particle emulsion, and the solid content of said fine particle emulsion is 2 times or more the content of the carbon black contained therein.

17. (Previously Presented) The ink set according to claim 16, wherein said fine particle emulsion of said black ink composition for medium gradation comprises a polyalkylene emulsion, an emulsion containing a pH-adjusted resin as a resin component or both,

wherein said pH-adjusted resin is obtained by a process comprising the steps of:

polymerizing an ethylenically unsaturated carboxylic acid monomer and another monomer copolymerizable with said ethylenically unsaturated carboxylic acid monomer in the presence of an alcoholic hydroxyl group-containing water-soluble polymer compound or a copolymerizable surfactant to give a copolymer having an acid value of 40 or less; and

adjusting the pH of said copolymer with an inorganic base.

18. (Previously Presented) A recording method of performing recording by ejecting a droplet of an ink composition to attach the droplet on a recording medium by using an ink set according to claim 13.

19. (Original) A recorded matter which is recorded by a recording method according to claim 18.
